BEST PRACTICE- 2019-20

Hands on Learning – Charts and Models

- In the Department of Zoology, we are practicing Hands on learning in which students are assigned with projects to prepare charts and models of the subject paper in that semester.
- Hands on learning is an educational approach that emphasizes practical, experiential learning activities, such as experiments, projects, simulations, and field trips.
- Hands-on learning allows students to actively engage with the material they are studying, rather than simply reading about or listening to it.
- Hands-on learning provides students with opportunities to explore and discover new concepts, apply what they have learned in real-world situations, and develop practical skills that can be used in their future careers and lives.
- It also helps students to develop problem-solving skills, critical thinking skills, and creativity.
- These activities require students to use their hands and minds together, and to actively engage in the learning process.
- Overall, hands-on learning is a powerful educational approach that can help students to develop a deep understanding of the material they are studying, as well as practical skills and knowledge that they can apply in their future lives and careers.
